AMAN CHANDEL

Full Stack Developer | MERN Stack
+91 78765 58243 | amanchandel2620@gmail.com | India

PROFESSIONAL SUMMARY

Full Stack Developer with 3 years of experience designing and delivering scalable MERN-based web applications across the complete development lifecycle. Expertise in React.js, Node.js, Express.js, and MongoDB, spanning frontend architecture, RESTful API design, database modelling, authentication systems, and third-party payment integrations. Delivered two large-scale production platforms for a UK-based driving school client — encompassing e-commerce, subscription management, instalment billing (Klarna & Revolut), multi-role admin panels, instructor management, and real-time revenue analytics.

EXPERIENCE

Contract Full Stack Developer (Remote)

14/12/2024 – 15/05/2026

Independent Contract – UK-Based Driving School Client — Remote, United Kingdom

- Engaged directly by a UK-based driving school as a contract developer to architect, build, and maintain two interconnected full-stack platforms from the ground up through to production deployment.
- Delivered SmartLearner — a complete MERN e-commerce and subscription platform — and a companion Instructor Booking & Management System, both now live and actively used in production.
- Collaborated closely with the UK client to gather requirements, iterate on features, and ensure both platforms met business and regulatory needs for the UK driving instruction market.
- Solely responsible for all deployment, hosting configuration, production support, and ongoing feature enhancements throughout the contract period.

Full Stack Developer

12/2022 – 12/2024

Verma Programming Minds (VPM) — mohali, India

- Built and maintained multiple production-grade MERN applications, owning solution design, database architecture, backend services, and full feature delivery for client projects.
- Developed responsive frontend interfaces with React.js and Redux Toolkit; engineered secure, scalable REST APIs using Node.js and Express.js with MongoDB.
- Managed authentication systems, third-party API integrations, and full deployment pipelines, collaborating with cross-functional teams to deliver on client requirements.

KEY PROJECTS

SmartLearner – UK-Based Driving School Platform

Technologies: React.js, Node.js, Express.js, MongoDB, Redux Toolkit, Klarna, Revolut, JWT, REST APIs

- Architected and delivered a comprehensive full-stack MERN platform combining e-commerce product sales, tiered subscriptions, and a learning management system within a single production application.
- Built a multi-role admin environment for managing product catalogue, user accounts, quiz content, subscription plans, instructor assignments, and revenue reporting through a centralised dashboard.
- Integrated an AI-powered chatbot using the OpenAI API (GPT) — enabling students to ask driving theory questions, get instant explanations, and receive personalised learning guidance within the platform.
- Designed and implemented 200+ RESTful API endpoints covering products, users, subscriptions, quiz engine, instructor assignments, payment flows, and
- revenue reporting — following MVC architecture with modular route/controller separation.

- Implemented student management covering enrolment, learning progress tracking, course material assignment, and quiz performance analytics with detailed scoring history.
- Developed a subscription billing engine supporting tiered plans, automated renewal cycles, and flexible instalment-based payment scheduling, allowing students to pay in structured parts.
- Integrated Klarna (Buy-Now-Pay-Later / instalments) and Revolut payment gateways, enabling both BNPL flows and direct card payments — improving checkout conversion for international users.
- Built an interactive quiz module with configurable question banks, auto-scoring, result tracking, and performance history for instructor-led student assessment.
- Engineered JWT-based authentication and RBAC enforcing granular permissions across admin, instructor, and student roles.

Instructor Booking & Management System – Driving School Panel

Technologies: React.js, Node.js, Express.js, MongoDB, Redux Toolkit, REST APIs, JWT

- Designed and built a full-featured instructor management and booking panel enabling driving schools to onboard, track, and manage the complete lifecycle of their instructor workforce. Developed a centralised instructor directory with add, edit, and deactivation workflows — capturing profiles, licence details, assigned regions, availability schedules, and employment status.
- Implemented real-time instructor status tracking for active and departed instructors, including join dates, resignation records, and tenure history for a complete auditable workforce overview. Built a dynamic booking module for scheduling driving lessons against instructor availability, with conflict detection, rescheduling support, and automated confirmation workflows.
- Developed a monthly revenue analytics dashboard aggregating per-instructor earnings, total platform revenue, lesson completion rates, and cancellation statistics.
- Implemented admin controls for configuring instructor pay structures, per-lesson rates, and auditing financial records across all instructors and time periods.

SKILLS

Frontend	React.js, Redux Toolkit, HTML5, CSS3, JavaScript (ES6+), Responsive UI/UX
Backend	Node.js, Express.js, RESTful API Design, JWT Authentication, Middleware
Database	MongoDB, Mongoose ODM, Firebase Realtime Database
Payments	Klarna (BNPL / Instalments),Stripe,PayPal, Revolut, Webhook Integration
Dev & Tools	Git, GitHub, Postman, VS Code, Web Hosting, WordPress, npm
Practices	MERN Full Stack, MVC Architecture, API Integration

EDUCATION

Bachelor of Computer Applications (BCA)

05/2019 – 05/2023

Goutam Group of Colleges, Hamirpur — India

CGPA: 7.2 / 10

INTERESTS

Cricket • Open-Source Coding • Travelling • Video Games
